PROFESSIONAL SUMMARY

Product and business analyst with a computer science foundation and 13 months of end-to-end ownership at a pre-Series A B2B SaaS company as the sole product and strategy hire. Experience spans customer discovery, requirements authorship, market sizing, KPI design, and dashboard delivery, backed by hands-on SQL, Python, and Power BI. Built three products from concept through launch, two using generative AI and natural language processing. Currently completing a STEM-designated M.S. at New York University with a 3.91 GPA.

CORE COMPETENCIES

Product Management, Business Analysis, Product Strategy, Requirements Gathering, PRD and BRD Authorship, User Stories, Acceptance Criteria, Roadmap Planning, Backlog Prioritization, RICE and ICE Frameworks, Customer Discovery, User Interviews, Market Sizing, TAM and SAM Analysis, Competitive Assessment, Go-to-Market Strategy, KPI Definition, OKR Setting, A/B Testing, Product Analytics, Funnel Analysis, Process Mapping, Gap Analysis, User Acceptance Testing, Agile and Scrum, Sprint Planning, Stakeholder Management, Cross-Functional Collaboration, Business Intelligence, Executive Communication

PROFESSIONAL EXPERIENCE

Business Strategy Analyst (Product and Operations) May 2024 to June 2025

Faclon Labs, *Pre-Series A B2B Industrial IoT SaaS*, *Mumbai*, *India*

Sole product and strategy hire. Owned roadmap and delivery across three product verticals covering inventory, analytics, and partner operations while the company expanded from India into North American markets.

- Shaped the FY2025 North American expansion strategy by conducting TAM and SAM analysis alongside competitor assessment across three industrial IoT verticals, quantifying an approximately $40M addressable market and presenting a prioritized recommendation directly to the CEO and CTO.
- Owned the full product lifecycle for the company Inventory Management System, running discovery interviews across four stakeholder groups covering operations, logistics, engineering, and sales, then authoring a specification of 20+ requirements with measurable success criteria.
- Improved supply chain reliability by 20% through the resulting feature set, with adoption across three business units within eight weeks of launch.
- Cut leadership reporting latency from seven days to 24 hours and reduced ad-hoc data requests by 35% by defining an eight-KPI measurement framework and building four self-serve Power BI dashboards in SQL and DAX covering inventory, sales, operations, and partner tracking.
- Reduced cross-team coordination delays by 30% across three partner cohorts by mapping failure points in the existing channel-partner onboarding workflow and rebuilding the process with milestone tracking and accountability checkpoints.
- Facilitated user acceptance testing across releases by authoring test cases, coordinating feedback sessions with business users, tracking defect resolution to closure, and signing off on release readiness.

PROJECTS

NextNest, Student Housing Matching Marketplace 2025 to Present

Next.js | *PostgreSQL* | *Claude API* | *Vercel* | *Neon* | *Stripe* | *DocuSign*

- Validated market demand across three university markets covering NYU, University of Michigan, and UC San Diego by conducting 200+ primary user interviews before development began, surfacing an unmet need for a trusted mid-term lease transfer path.
- Translated interview findings into a prioritized roadmap using RICE scoring, shipping .edu verification, e-signature lease assignment, and escrow-based furniture bundling while explicitly deferring a landlord portal and virtual tours to a later phase based on low interview signal and high build cost.
- Built a deterministic fit-score matching model and a trust and scam detection layer using the Claude API with heuristic fallback, validated end to end through a bot harness generating live traffic and funnel analytics.

SafePaste, Open-Source Data Privacy Tool 2024 to Present

Python | *Natural Language Processing* | *Regex* | *Open Source*

- Shipped a tool detecting and redacting six or more categories of sensitive data including personally identifiable information, API keys, and credentials in under 500ms with fully on-device execution and no data egress.
- Validated the problem through community research and set precision, false-positive, and latency targets before writing code, making local-only processing a non-negotiable design constraint.

- Reduced edge-case failures by 30% and expanded detection to two additional data categories through a structured post-launch feedback loop with early testers.

AI-Driven Placement Management System Aug 2023 to Feb 2024

Python | Flask | Google Gemini-Pro | MySQL | Jira

- Achieved a 30% end-to-end efficiency improvement and a 60% reduction in manual screening time as product lead for a four-person team by integrating a generative AI model into the candidate screening workflow.
- Authored the product requirements document with user stories and acceptance criteria, ran backlog prioritization using RICE, and coordinated three delivery sprints from discovery through user acceptance testing to deployment.
- Validated delivery against 12 acceptance test cases with full defect resolution prior to launch.

Insurance Operations Analytics Dashboard 2024

Power BI | SQL | Python | DAX

- Reduced ad-hoc reporting requests by 40% across three stakeholder teams by designing an eight-KPI framework covering claims throughput, risk exposure, policy conversion, and churn signal, then delivering it as a self-serve dashboard.

EDUCATION

M.S. Project Management (STEM Designated) 2025 to 2027

New York University, School of Professional Studies | GPA: 3.91

Coursework: Product Strategy, Data-Driven Decision Making, Agile Project Development, Business Analysis, Agile Project Management

Post Graduate Diploma, Data Science and Business Analytics 2024 to 2025

Mumbai University, Patkar Varde College | GPA: 9.05/10

B.S. Computer Science 2021 to 2024

Kishinchand Chellaram College | CGPA: 9.73/10

TECHNICAL SKILLS

Programming: Python, SQL, JavaScript

Data and Business Intelligence: Power BI, Tableau, DAX, Pandas, NumPy, Advanced Excel, Google Analytics, ETL Pipelines

Artificial Intelligence: Natural Language Processing, Generative AI, Google Gemini-Pro, Claude API, LLM-Powered Workflows, Regex Automation

Web and Backend: Flask, Node.js, Next.js, React Native, REST APIs

Databases and Cloud: MySQL, PostgreSQL, Neon, Vercel, AWS

Tools: Jira, Confluence, Notion, ClickUp, Figma, Git, GitHub, MS Project, Stripe, DocuSign | **Languages:** English, Hindi
